

## The Bee Walk Map Of Garons Park

This 3km Trail has been carefully designed to encompass a variety of different environmental niches located at Garons park from grasslands and meadows to hedges and roadside verges. The intention of the Beewalk is to follow the trail and observe the diversity and abundance of bee species located on the trail and record the findings in the recording sheet. This data can then be used to identify how Garons Park can adapt the environment to encourage a diverse range of bee species, through the identification of particularly favoured forage, favoured environments and where bees are absent.

**The red line on the Map outlines the route in which the beewalk should take place.**
